

What type of feed are you making?

High value, bagged coarse mixes
e.g., horse feed, pedigree calf mixes

Molglo

The high energy molasses-based blend for coating coarse mixes.

- Long lasting glaze ideal for bagged products
- Improved shelf life for bagged products
- Improved colour, texture and palatability
- Contains emulsifiers, surfactants and mould inhibitors to ensure optimum flowability and stability
- Enhanced feeding value
- Easy handling and high inclusions without problems
- Less dust, reduced caking and no mould
- Standard 4.5% SBO inclusion, 3.5% option available

Coarse mixes and blends

Blendflo

A range of four high performance products containing different oil and sugar levels tailored to suit different requirements

Blendflo Xtra

67% DM,
30.5% TSAS,
3.3% oil
+caramel flavour

Uses: High values bulk blends and coarse mixes

Blendflo Standard

64% DM,
25% TSAS,
2.2% oil
+caramel flavour

Uses: General purpose coating liquid suitable for all blends and coarse mixes

Blendflo Easy

62% DM,
23% TSAS,
1.2% oil
+caramel flavour

Uses: Lower value bulk blends where de-dusting and good handling properties are key

Blendflo MIX-A-COAT

61% DM,
24% TSAS,
3% oil
+caramel flavour

Uses: Cost effective option for dust suppression and use in mill and mix operations

- Easier feed handling and better keeping quality with added preservatives (*key for bagged products)
- Emulsifiers and surfactants are added to the blends to improve flowability and reduce the stickiness of the blend in the mixing system

- Enhanced appearance and improved palatability
- Less dust and no mould
- Allows higher liquid inclusions with less build up on production machinery
- Cost effective and simple to use

Compounds

Scope Range

A range of different specification products to suit the value and physical properties of the finished product and the application point within a mill.

Scope EXL

45% DM, 5% TSAS,
3% oil +caramel flavour

Scope 300

63% DM, 27% TSAS,
12% oil +caramel flavour

- Scope EXL designed to replace vegetable oil as a sprayed product with lower amount needed to keep dust down
- Benefits of molasses over fat spraying as well as significant cost savings, faster throughput, little or no heat required
- Highly effective dust control in the mill improved pellet appearance, palatability and intakes
- Added emulsifiers and surfactants to improve flowability and reduce the stickiness of the blend in the mixing system
- Precise balance between shine and stickiness

COATING PRODUCT RANGE

Our coating products range can be used for both livestock, horse and pet feed production and are used for a range of reasons including improving the keeping qualities and appearance of bagged products and reducing dust. The Scope product range can also be used to replace high-cost conventional vegetable oil applications. Whether you are making coarse mixes, blends or compounds, it is essential to achieve the desired finish on the feed to satisfy the end user. Traditional molasses blends are less suitable for this application as they do not provide the long-lasting finish required for these products. ED&F Man have developed a range of specialist liquid coating products, designed for a wide range of feed production systems and each tailored to precise market requirements and individual customers needs. The option for bespoke products to suit specific feed production needs are also offered.

Key benefits

- Improved shelf life
- Reduced dust
- Better appearance
- Easier handling
- Cleaner machinery
- Reduced energy use in the mill
- Cost savings

Bespoke options

With a wide range of feeds being manufactured, sometimes there may not be an existing product exactly suitable. In this situation, ED&F Man can use their expertise in liquid blending to produce a liquid tailored to the individual requirements. We can also advise on liquid application systems to ensure the desired results are obtained in a cost-effective package. Whatever the production system, either static or mobile, ED&F Man can produce a coating product that works for you.
