

Liquid
Products

Did you know that you can add magnesium to any ED&F Man molasses based liquid feed?

Why opt for magnesium in molasses?

Ruminants depend on a daily dietary supply of magnesium, around 35g per day

During spring, the supply of magnesium in fresh grass is low and inhibited by potassium-containing fertilisers

The first sign of a magnesium deficiency is often death!

Prevention is better than cure

Magnesium is a relatively bitter and unpalatable mineral, however, using liquid feeds the sugars help to mask the taste

ED&F Man Liquid Products only use magnesium chloride which is the most bioavailable form of magnesium
