

Glyco-Ale - Technical Data Sheet

Feeding Suitability

Cattle

Glyco-Ale is a blend of cane molasses, glycerine and co-products. It is highly palatable with a balance of both energy and protein. It has been shown to increase intakes, reduce dust and stimulate forage digestion. Ideally suited when looking for a balance of energy and protein. The addition of glycerine to the molasses based liquid feed stimulates glucose production which is key for effective metabolism in high performing cattle. It has been shown to improve milk production and carcass composition.

Glyco-Ale is suitable for all feeding systems.

Benefits include:

- High nutrient density providing a rich source of sugars and energy
- Supports milk production in the first 100 days of lactation
- Provides an extra source of propionate in the rumen, saving amino acids for protein synthesis
- Thorough absorption into rations helps bind feed, reducing sorting and dust

Typical Feed Rates

	Dairy	Beef	Youngstock
Feed Rate (kg/head/day)	1 - 3	1 - 2	Up to 1.0

Specification

	Dry Matter Basis	As fed
Dry Matter (%)	100	60
Total Sugars (%)	32	19
Carbohydrate (%)	12	7
Crude Protein (%)	16	9.6
ME (MJ/kg)	14.5	8.7
Oil (%)	0.5	0.3
Ash (%)	10.1	6
Sodium (%)	0.1	0.06
Crude Fibre (%)	0	0
DCAB (mEq/100g)	128.99	

For further nutritional information, including NutriOpt data, to input into rationing software please contact technical-info@edfman.com

Availability:

Glyco-Ale is available in bulk from 5-29t.

Typical specific gravity of 1.30kg/L or density of 769L/T.
