RoboMol - Technical Data Sheet

Feeding Suitability
Cattle

Cattle

Robomol is a highly digestible, high sugar and energy blend that has been filtered down to 125 microns, designed specifically for use in robotic milking herds. The lower viscosity of the blend achieved optimal flowability through robots. The high palatability of Robomol with the addition of flavouring helps encourage cows to visit the robot to help drive production on farm.

Benefits include:

■ High energy to support production
■ High palatability increases robot visits maximising animal performance
■ Farmers have reported that heifers are easier to train
■ Sugars help stimulate rumen function and microbial protein production

Typical Feed Rates

	Dairy
Feed Rate (kg/day)	0.5 - 1.0

Specification

	Dry Matter Basis	As fed
Dry Matter (%)	100	43
Sugars (%)	21	9
Starch (%)	17.5	7.5
Total Carbohydrate (%)	42	18
ME (MJ/kg DM)	14.1	6.1
Oil (%)	0	0
Ash (%)	1	0.4
Sodium (%)	0	0

Availability:

Robomol is available in IBC's delivered to farm.
Typical specific gravity of 1.22kg/L and the density is 820L/T.
