

BIOPRO PRIME 20

The high performance liquid supplement for livestock at grass, or on forage-based systems.

PRIME 20

Prime 20 is a molasses based liquid feed supplement which includes sugars, protein and essential vitamins and trace elements. It is suitable for feeding to sheep and cattle.

When to use Prime 20 for sheep

- Pre-tupping - flushing ewes to improve their nutritional status and body condition score will improve ovulation rates and lambing percentage
- Pre-lambing and post-lambing - as a supplement to forage

Prime 20 should be introduced 8 weeks prior to lambing. As a forage supplement, Prime 20 will sustain ewes expected to bear singles. For twin-bearing ewes, it can be used up until 4 weeks pre-lambing, after which an additional (bypass) protein supply should be included in the ration.

Feeding sheep

One of the key benefits of Prime 20 is that it can be fed to sheep from free access wheel-lick feeders. Wheel-lick feeders come in a variety of sizes: 35 litre, 95 litre and 250 litre and should ideally be sited on areas of hard standing to prevent poaching.

Typical daily intake: 0.25kg / head / day.

When to use Prime 20 for cattle

- To supplement poor quality forage
- To de-dust and nutritionally balance cereal-based rations

Prime 20 is suitable for supplementing cattle throughout the year. It supplies readily fermentable energy and so balances starchy cereal-based rations.

Feeding cattle

For cattle, Prime 20 is more suitable for pouring over forage. Recommended feeding rates are 0.5-1.5kg / head / day, depending on the quality and nutritional value of the rest of the ration.

The 35 litre mini lick feeder

This versatile 35 litre feeder can conveniently be used at grass or indoors and with a 4” fill lid, topping up is easily done. It is ideal for small numbers of stock or when the feeder needs moving frequently.

The five-wheel lick feeder

This most recently developed feeder has a stand-alone capacity of 95 litres but can also be attached to a storage tank and topped up daily with a simple turn of the tap. This gives a feeding capacity of 1,000+ litres.

Key benefits include:

- Protein, energy, vitamins & minerals in one easy-to-use feed
- Ad-lib feeding reduces stress for sheep and saves time for shepherd
- Highly palatable and improves intake and forage digestibility
- Balances variations in grazing/forage quantity and quality
- Easy and convenient to store, handle and feed

Typical dry matter analysis	Prime 20
Dry Matter (%)	67
Sugars (%)	58
Protein (%)	29.9
ME (MJ/kg DM)	12
Vitamins & Minerals	✓

Vitamin	Inclusion (IU/kg)
Vitamin A	42000
Vitamin D3	8000
Vitamin E	150

Mineral	Inclusion (mg/kg)
Cobalt	3
Iodine	20
Manganese	400
Zinc	400
Selenium	2.5
Copper (Cattle Mix ONLY)	120

Delivery size options: 1000 litres to 29mt
